

A photograph of three business professionals in a meeting. A woman on the left in a white blazer and glasses holds a white mug. A man in the center in a white shirt and tie looks at a tablet held by a woman on the right in a light blue shirt. They are seated around a table with a coffee tray in a bright, modern office setting.

Continuous Delivery Architecture (CDA)SM Certification Training - Brochure

Learn CDA best practices to design, implement, and manage DevOps deployment

What is CDA?

A continuous delivery architect is a tool-agnostic individual engaged in the design, implementation, and management of DevOps deployment pipelines and toolchains that support Continuous Integration, Continuous Delivery, Continuous Testing and, potentially, Continuous Deployment.

Key Benefits of CDA for Businesses

- Continuous Integration and Continuous Deployment
- Architecting a deployment pipeline
- Testing and continuous delivery

About the CDA Training Course

Participants attending this CDA certification training will gain knowledge about the design, implementation, and management of DevOps deployment pipelines and toolchains that support Continuous Integration, Continuous Delivery, Continuous Testing and, potentially, Continuous Deployment. A continuous delivery architect is also involved in defining or integrating underpinning processes, metrics, APIs and cultural considerations.

Who will benefit from the CDA Certification?

Job roles that can benefit from CDA certification include, but are not limited to:

- Anyone involved in cultural transformations and organizational change
- Security professionals
- Enterprise architects
- Build engineers
- Release managers and engineers
- Project Managers
- Software developers
- Operational and infrastructure teams
- Testers and QA managers
- IT Managers
- Maintenance and support staff
